

ZEROL[®] ICE

What started out as corrective action, is now considered a good preventative maintenance practice!

ZEROL ICE is a revolutionary, fully synthetic lubricant performance enhancer designed specifically for use in stationary air conditioning systems. It may be added to the compressor lubricant as a single liquid dose during an initial fill, repair or maintenance (lubricant/gas top-up/refill) operation. It can be professionally added either by itself or admixed in the conventional oil and is applied using conventional oil charging methods.

- Fully synthetic performance enhancer designed specifically for use in stationary air conditioning systems
- OEM approved field remedy for sticking TXV's
- ZEROL ICE is compatible with many common air conditioning lubricants such as mineral oils, alkylbenzenes and polyolesters and with R-22, R-134a, R-410a and other common HFC refrigerants

Recommended usage: (1) bottle per system applied using an oil/dye injection tool.

4 oz. Bottle
Part No.: 040232191046

4 oz. Oil Dye injection
tool Part No.: 69562
