

“What are you working on today?”

4 Things You Need to Know About Totaline UVGI (Ultra Violet Germicidal Irradiation)

1. A Totaline UVGI solution is an environmentally friendly and scientifically proven method to destroy disease causing virus, bacteria and mold growing within HVAC systems.
2. A Totaline UVGI system installed on an existing HVAC system will improve indoor air quality, increase system efficiency, reduce system operating costs and eliminate manual coil cleaning.
3. Conditions within an HVAC system can be optimal for rapid growth of harmful pathogens.
4. A Totaline UVGI system offers options that provide multiple benefits to you and customers:
 - a. Ease of installation – a typical system can be installed in less than hour.
 - b. Healthier Indoor Air – the HVAC system will no longer be a reservoir and generator of contaminants that create unhealthy air.
 - c. Reduced maintenance costs and lower operating costs – no need to manually clean coils, equipment performance remains optimal and equipment EOL is extended.
 - d. Replacement emitter sales - Only maintenance required is an annual change of the emitter, which provides opportunity for additional income and potential sale of other products.
