

Genuine Carlyle™ Remanufactured Compressors

Factory Authorized Parts™ have been designed and built specifically for Carrier®, Bryant® or Payne® equipment. These parts are the perfect fit, restoring equipment to its original performance and are available at your local Carrier, Bryant or Payne equipment distributor. **2-Year warranty** on all Factory Authorized Parts™ excluding compressors and commercial applied parts.

		Genuine Carlyle™ Remanufactured Compressors
System Performance	Features	
	Latest Design	Genuine Carlyle Compressors are remanufactured to the latest Carlyle Engineering standards. All engineering upgrades and improvements are applied to each Genuine Carlyle Remanufactured Compressor.
	Built to Rigid Specifications	Compressor cores used for Genuine Carlyle compressors are dismantled to their smallest components. Critical wearing parts are automatically discarded, even if they are perfectly serviceable. All other components are evaluated to determine if they meet current Carlyle standards. Deviations of 1/2000th of an inch or less may be tolerated for some components, for many others zero deviation is required or part is not used
	Matched Components	Genuine Carlyle Reciprocating compressor consists of at least 450 component parts routinely upgraded by Carlyle engineers, many of which must be matched to ensure optimal performance. For example, only high efficiency valve plates, pistons and motors are used in combination.
	Gasket Materials	Genuine Carlyle compressors utilize coated metal gaskets, which maintain their integrity under higher operating pressures.
	Electric Motor	The rotor and stator iron of all cores are removed, tested and evaluated to determine if they meet Carlyle standards. The removal of the stator iron is difficult and Carlyle uses special techniques to ensure the stator is not damaged.
	Oil Pump	Genuine Carlyle compressors are equipped with high flow oil pumps, which provide increased lubrication and operate at higher oil pressures. These pumps can also be used with POE and Alkylbenzene oils which make it possible to use HFC refrigerants in Carlyle compressors.
System Reliability	Highest Available EER	Genuine Carlyle compressors are built to the highest efficiency standards in the industry. Efficiency is produced by the combination of Genuine Carlyle valve plates and motors.
	Highest Quality Standard	Genuine Carlyle Compressors are remanufactured to the current original equipment manufacturing or OEM standards. More than 20,000 Carlyle compressors are remanufactured in the same plant by the same craftsmen that manufacture new Carlyle OEM compressors.
	Carrier Warranty	Genuine Carlyle Compressors are backed by Carrier Corporation (RC), which warrants each Re-manufactured compressor to be free of manufacturing defects for a period of two years.
Safety	UL Approved	Genuine Carlyle Compressors are UL listed and approved. Every Genuine Carlyle Service Compressor has been built to comply with internationally recognized safety standards, minimizing the risk of fire, electric shock, or other safety hazards. UL also conducts ongoing, unannounced audits at the Carlyle facility four times a year, ensuring the highest quality for the compressor. 

Factory Authorized Parts™ are the ONLY replacement parts authorized by Carrier Corporation for use on Carrier®, Bryant® and Payne® branded equipment.

Factory Authorized Parts™ are only available thru your local Totaline® Sales Center.
